

## Previewscreen Keeps your Offices and Worksites COVID-19 Free

Employee COVID-19 Self-screening, Report to Work, and Compliance with Federal & State Requirements

Previewscreen is the **first** employee COVID Report to Work App since 05/29/2020 and has been evolved into a leading app of this kind in the market. Figure 1 demonstrates Previewscreen key blocks which enable HR/Safety officers to user-friendly and effectively manage the company's COVID data securely. As shown in Figure 1, the major functions are (i) Manage Employees, (ii) Vaccine & Test Management, (iii) Daily Health Screening, (iv) Visitor Health Screening, (v) Access File Upload Reports, (vi) Manage Organization, (vii) Manage Employee Roles, and others (e.g., Case tracking). For example, it allows a company to manage a large number of employees in a hierarchical structure (i.e., different offices and locations) with different accessibility in a fine-grained role-based access control method. Previewscreen is deployed on the Microsoft Azure Cloud and operated securely and reliably in the principle of Trust Services Criteria, i.e., Security, Availability, Confidentiality, Processing Integrity, and Privacy. Customers' PII & PHI data and other confidential information are collected, used, retained, disclosed, and destroyed in accordance with service privacy policy and business objectives. As a complete employee COVID solution to protect your company's safety & health and prevent the spread of Coronavirus throughout your business, Previewscreen primarily includes:

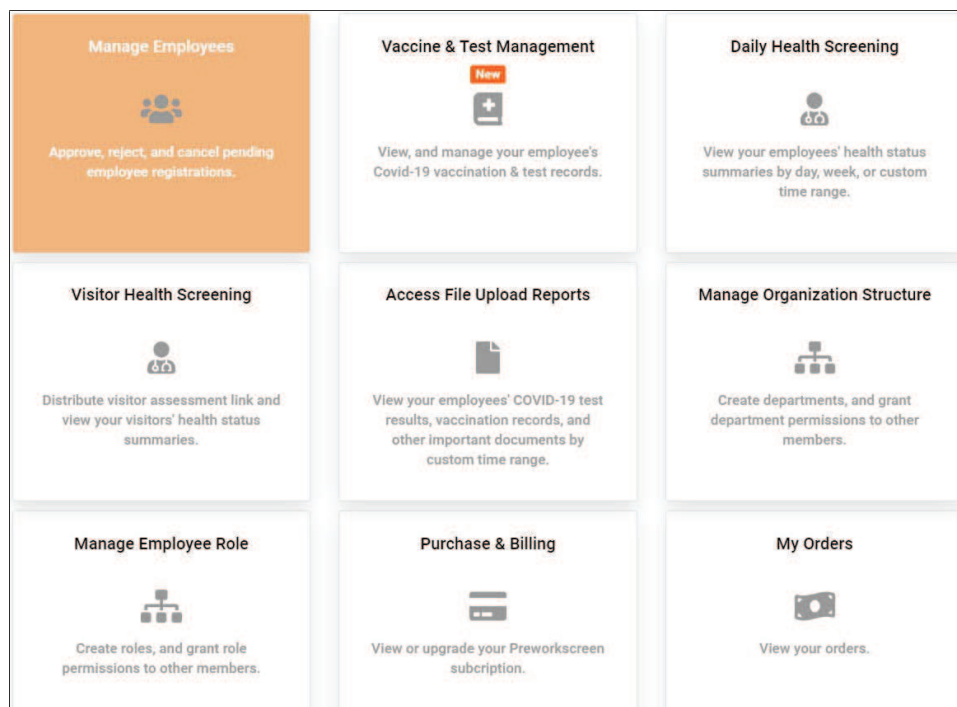

Figure 1: Previewscreen Admin Dashboard (Partial)

- **Daily COVID-19 symptom self-screening:** Previewscreen is an online COVID-19 daily health screening system that lets employees and customers perform self-health checks, log their results, and report to the company's HR/Safety Officers from their mobile phones or browsers. HR/Safety Officers can user-friendly manage the employee's COVID-19 information in an easy and effective way and take actions in a real-time fashion.
- **Vaccine tracking & verification:** Previewscreen's Vaccination Tracking solution keeps an organization compliant and up-to-date with your employee's vaccination statuses. It complies with President Biden's new vaccination mandate requiring all companies with 100+ employees and federal workers to attest vaccination status or submit to regular testing and mitigation. Noticeably, Previewscreen designed interfaces for HR/Safety Officers to quickly verify the vaccination information submitted from employees. Statistical results show the vaccination status by date periods, employees, departments, or the entire organization.
- **COVID test tracking & verification:** HR/Safety Officers can configure unvaccinated employees to conduct weekly tests and determine if they can go to offices. Unvaccinated employees submit test results via mobile phones or browsers and the results are immediately notified to HR/Safety Officers. HR/Safety Officers will be notified by email/text in a real-time fashion if someone submits a positive test. Meanwhile, HR/Safety Officers can easily verify the testing results by checking the proof of submitted image/pdf files.
- **Visitor self-screening and vaccination report:** Screening for visitors can be easily done by a QR code and a link via App or web. Previewscreen offers powerful visitor management functions, such as by invitor, department, or group.

In addition to general employee account, Previewscreen provides family account for kids (or patients or older) to associate with a parent account.

**Questionnaires/functions can be customized easily, e.g., we can add, modify, or update questionnaires for you without needing your work and cost.**

## COVID-19 Policy Automation & Powerful Features

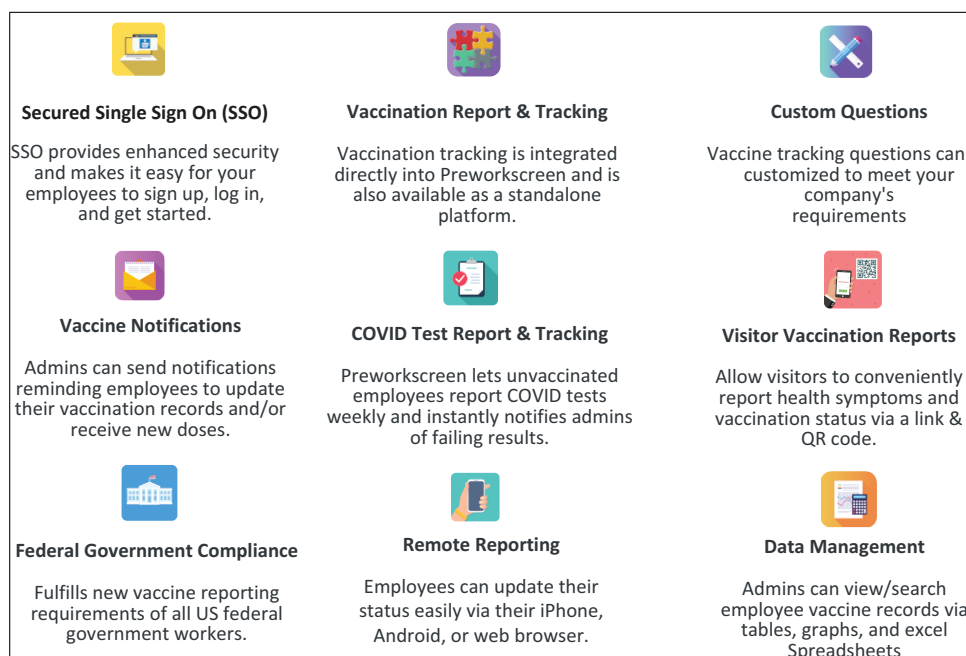

Previewscreen provides many useful features for HR/Safety officer's time-saving with automation derived by employee's health status. It allows HR/Safety officers to configure their Vaccine and Test tracking policies in the scope of the organization, e.g., when to submit vaccination and test reports per employee. After a company account is created, implementation is simple as the configuration of the company's self-screening, vaccination, and testing policies. Figure 2 demonstrates the options to configure the vaccination policy in the company.

For example, if it is configured with *Do you want your employees to fill out the vaccine survey questions at login, if it is not complete?* as shown in Figure 2, an employee will be reminded to submit his/her vaccination information at the time of logging into the account until he/she is fully vaccinated. By simple configuration, workflows are automatically formulated to integrate self-screening, vaccination, and testing policies cost-effectively for a company whichever small or large.

Figure 3 shows the key features implemented for vaccination and test tracking. Previewscreen's iPhone & Android app allows employees to complete their COVID-19 self-assessments on the go. Note that our browser accesses via a company unique link also are mobile friendly for mobile phones, tablet, computers, etc., offering addition portability other than mobile app. SSO (Single Sign On) is provided for enhanced security and makes it easy for your employees to sign up, log in, and get started. It allows quick and batch employee enrollment to Previewscreen system and allocates them into departments. Employees just simply log into the app, submit their response to our state-compliant COVID-19 self-screening or vaccination/test form, and the results will automatically be stored on the dashboard for HR/safety officers to access. Instant email/test notifications will be sent to HR/safety officers for critical events, such as non-passing employee testing and self-screening results.

**Previewscreen automates self-screening/vaccination/testing procedure and effectively interconnects employees and HR/safety department by phone calls, email, or text message.**

## User Friendly App and Easy Communications

Preworxscreen is a user-friendly system for both employee/visitor and HR/safety officer who acts as administrators. Each company has a unique QR code that can be printed on papers, webs, social media, or displayed on e-devices at the office places. Corresponding to the QR code, a company link is also provided to distributing it to users by email and message. Preworxscreen offers a powerful dashboard for HR/safety officers to know the details as well as the overall health status of their work sites in real-time. It connects HR/safety officers and employees smoothly that is quick, safe, and responsible. From the dashboard, HR/safety officer can view/search employee self-screening/vaccination/test records via tables and graphs and export them in Microsoft Excel and PDF files. Self-screening/vaccination/test records can be searched and tracked for employees according to the name, employee ID, emails, etc. Figure 4 demonstrates the screenshot that allows HR/safety officers to review the details of the vaccination record and take actions, such as approve, reject, update, and modify the records subsequently. The updated status will be emailed to employee automatically. Furthermore, a HR/safety officer can write a reviewing note and immediately send it to the corresponding employee. Similar verification functions are provided for testing tracking.
